

UKAEA

**FISPACT-II**

**Worked example**

# Self shielding example

Self shielding is a next order correction for an inventory calculation.

## Worked example: Irradiation of Tungsten for 10 years

1. Configure FISPACT-II to irradiate 1kg of Tungsten for 10 year
2. Use Tendl17, GEFY6.1 and the fluxes from the FNS getting started example

# Irradiation of Tungsten

- Irradiate Tungsten for 10 days

Within FISPACT-II self shielding is accounted for by altering the reaction cross-sections.

## SSFCHOOSE *n nprint sym*

- *n* number of element or nuclides
- *nprint* is by default 0, in which case it prints the list of probability table data files and the nuclide mixture. If it is set to 1, then it additionally prints total and partial cross-sections and dilutions versus energy bin for all the nuclides to which self-shielding is being applied.
- *sym* may either be element names (e.g., Ti) or nuclide names (e.g., W182)

## PROBTABLE $m$ $n$

- Causes the probability tables to be read for the nuclides specified by the elements listed by the SSFCHOOSE
- $m = 1$  apply self-shielding to the existing cross-section value as a multiplicative factor,  $m = 0$  the cross-section values in the energy groups, for which there are probability table data, are replaced by values which are derived directly from the probability tables

## SSFMASS *m indx*

- *m* total mass (kg)
- *indx2* number of elements in the material to be used in the self-shielding calculation

## prob\_tab

- Need to point the files file to the probability tables

# Self shielding conclusion

- PROBABLE
  - Causes the reading of the probability table
- SSFMASS
  - Defines the material to be used in the self shielding
- SSFCHOOSE
  - Defines the material composition
- prob\_tab
  - location of the probability table

*At present, the probability table data are available only for the 616 and 709 energy group structures for neutrons. Attempts to use this keyword with other projectiles or cross-section datasets with other than the 586, 616, 709 or 1102 energy group structure will cause Fispact-II to terminate with a fatal error.*
